

Create a new project in overleaf (or your favorite latex editor), and add the main.tex file included in the assignment to the new project.

Do the exercises in the file, filling in your answers in the .tex file. Read the instructions in the file carefully, so you know what you must do. In a nutshell, you must follow the courses at the website mentioned in the .tex file. There are three in total. Instead of doing the exercises on the website, we made a sub-selection for you in this assignment.

When you are ready, submit your pdf document on Blackboard!

Good luck!
